### HIGHLIGHTS

- Overview of all current and future seals of approval & certificates
- Extended attributes of the certifications
- Links with articles, suppliers up to the sales channel
- Competitive advantage through proven certifications
- Quick list for sales channels, stores & marketplaces
- Relevance for purchasing, production, sales markets B2X

Whether legal quality seals, certificates of origin, internal quality seals or specific certifications. With the INTEX Certification Cockpit you make optimal use of the quality and sales potential of certifications.

### The challenge

Quality seals and certificates as building blocks of quality management.

Quality assurance and thus proof of certain product properties/requirements are becoming increasingly important, and not only in the European Economic Area. How can manufacturers prove the required criteria quickly and transparently in the future? A central storage location in your IX ERP would be ideal so that the user no longer has to look in different storage locations to find and monitor all certificates. The interface should be as easy to use and clear as possible. The user can see at a glance which articles are linked to which certificates, from whom these certificates originate, when they were created and how long they are valid. Of course, the user is also shown whether it is an initial certificate or a follow-up certificate and which of his sales channels requires which certificate.

### The Solutions - The IX Certification Cockpit

Via the IX Certification Cockpit you have an overview of all initial certificates, changes and/or updates in your IX ERP at any time and can control them centrally and intuitively. As a user, you keep the overview with our proven cockpit concept. Traffic light colors signalize whether there is a need for action or not. Further functions, which for example facilitate the daily work with sales channels, are thus linked to the article and the corresponding certificates.

In addition to the article/certificate overview, the module will also offer intelligent editing functions in the future, such as:

- Display of certification at product level
- Marking of relevance regional, supra-regional, national, international
- Linking of certificates with each other
- Linking of sales channels with the certificates required for them
- Bundling of all sales articles with selected certificate
- Linking of sales channels with required certificates
- Article mapping for the corresponding link
- ...
